

Use Security Scoring to Quantify Your Cyber Risks

Free Webinar

28 Oct 2020,
14:30 – 16:00

Online Broadcast

Cantonese

SMEs in Finance,
Insurance &
Securities sectors

Handling sophisticated cyber attacks, threat prevention and risk management have become more challenging. Cyber security scoring provides a tool to evaluate the security level of an organisation continuously through external threat intelligence sources. Security scoring can complement traditional risk assessment by providing a non-intrusively and “outside-in” approach to monitor the weaknesses and vulnerabilities of an organisation.

In order to understand whether the security controls of an organisation is adequate, its security score can also be used to compare with peers of the same industry for benchmarking purpose.

In this webinar, we will also show SMEs in finance, insurance & securities sectors on how to use cyber security scoring to manage security posture continually and to benchmark with industry peers.

Objectives

From this webinar, the participants will learn the following:

- An overview of cyber threat outlook
- How security scoring helps to mitigate or even prevent potential cyber risks
- How to use sector specific score to benchmark organisation security posture
- The SecurityScorecard LITE Service for SMEs

Use Security Scoring to Quantify Your Cyber Risks
