

# Prevention of Ransomware

## Backups and Updates

Backup data regularly and keep them offline

Install the latest patches for all software and systems

## Security Awareness

Do not open any suspicious emails, as well as the attachments and hyperlinks inside

Refrain from visiting suspicious websites or downloading any files from them

## Network and Endpoint Protection

Deploy anti-malware software and keep it and its signature up-to-date

Deploy network firewalls and spam filters

Schedule a regular full scan

## Security Configuration

Disable or restrict all unnecessary system services or functions

Apply the principle of “Least Privilege” of all systems and services

Disable macros for office applications
